

ENRAVIT-80TM

Enramycin 8% Premix

Enravit-80 is a kind of polypeptide compound which has a strong antibacterial activity against Gram positive bacteria, and inhibits the development of major pathogens of the gut flora. Adding Enravit-80 into feed can increase weight gain, improves feed conservation efficiency.

Composition:

Each kg Contains :

Enramycin - 80 gms

Indications / Benefits:

- Enravit-80 has a strong antibacterial effect under both aerobic and anaerobic conditions. It is effective primarily against Gram +ve bacteria.
- Enravit-80 is a growth promoter and improves the feed efficiency.
- Enravit-80 depress ammonia producing organisms, thereby reducing ammonia levels in the intestinal contents and blood.
- Resistance to Enravit-80 develops very slowly.

Dosage:

10-15 gms / kg of feed (or) As directed by aqua culture consultant

Packaging:

1 kg
